## Load Bank Testing

Load Bank Testing confirms the ability of your generator to produce a given kW and attain proper engine operating temperature.

Benefits of Load Bank Testing are:

- Exercising of cooling system
- Reseat engine piston rings in the cylinders and liners
- Burn off carbon deposits in the combustion chamber, injector nozzles, piston rings, turbocharger and exhaust system
- Dissipate any condensation build-up on generator's copper windings

Engine safety shutdowns will be fully tested
